

## SO SoundChair

**Product Description:** A musical instrument by design, this comfortable lounge chair is like a speaker you lay upon that creates both sound & tactile vibrations, which are absorbed into the body. The SO SoundChair holds the body at a proper relaxed angle to gravity, which NASA research has stated, allows the heart to pump easily to all parts of the body. SO SoundHearts™ are attached at specific locations of a specially developed diaphragm and use an amplified audio signal to resonate the surface of the chair. Being the original developer of the “sound chair”, we continue to add years of research and development that honor the “Laws of Harmonics” coupled with human anatomy. This unprecedented design of the chair is leading the industry in sound delivery and provides innovations not seen in any other types of sound chairs.

### **Product Specifications:**

**Components:** Available in two models; Original Carbon Fiber diaphragm (top of the line) or Wood-diaphragm w/carbon fiber panel inserts. Four to Six SO SoundHearts™ Within). SO Chord CD. Optional amplifier package.

**Power Requirements:** AC 110V
